I am excited to hear that this is on the way. I have been waiting for the ability to have production in a map again! Question for anyone with knowledge on this though. I am working on creating a map for my own use in FS19. I am wanting to start converting my factories from my FS17 map over to my new one so I am ready when GC comes out. Can I leave the triggers in the mods from FS17 or will new triggers be required. I don't have a lot of knowledge of these things. Any advice would be great.
